/ <u>Java Test - Try 1 - 2/1</u>	<u>/2025</u>
Started on	Thursday, 2 January 2025, 9:50 AM
State	Finished
-	Thursday, 2 January 2025, 11:33 AM
	1 hour 43 mins
Grade	Not yet graded
Question <b>1</b>	
Correct	
Mark 2.00 out of 2.00	
Which of the follow	ving methods is used to create a new thread in Java?
	<b>3</b>
oa. run()	
b. start()	
c. execute()	
od. begin()	
Your answer is cor	rect.
The correct answe	r is:
start()	
Question <b>2</b>	
Correct	
Mark 2.00 out of 2.00	
The finally block is	optional in Java exception handling.
<b>.</b>	20
Select one:	
● True	
<ul><li>False</li></ul>	
_,	
The correct answe	r is 'True'.

Question <b>3</b>	
Correct	
Mark 2.00 out of 2.0	
In Java, String	g objects are immutable.
Select one:	
● True	
○ False	
The correct ar	nswer is 'True'
THE COTTECT OF	iswer is True.
Question <b>4</b>	
Complete  Marked out of 6.00	
Discuss the di	fference between checked and unchecked <u>exceptions</u> in Java. Provide examples of each and exp
	ceptions are exceptions that the compiler forces you to handle. You must either catch them usin in the method using the `throws` keyword.
	exceptions are exceptions that are not required to be handled - like errors that are the result of
pointer dere	eferencing or array index out-of-bounds.

Question <b>5</b>	
Complete	
Marked out of 6.00	
Describe the lifecycle of a (JVM).	Java program from source code to execution. Include the roles of the Java Compiler
<ol> <li>Compilation (javac): T</li> <li>Bytecode Verification: violations of the security</li> <li>Execution: The JVM ex</li> </ol>	e Java source code in `.java` files. he `javac` compiler converts the `.java` file into bytecode (`.class` files) The bytecode is verified by the JVM (a componenet called class loader/verifier) to en rules or other errors. Executes the bytecode. It chooses either interprets the bytecode or compiles it into na mpiler for better performance OR to compile it Ahead of Time (AOT)
Question <b>6</b>	
Correct	
Correct Mark 2.00 out of 2.00	eated by extending the Thread class or implementing the Runnable interface.
Correct Mark 2.00 out of 2.00	eated by extending the Thread class or implementing the Runnable interface.
-	eated by extending the Thread class or implementing the Runnable interface.

# Question **7**Complete Marked out of 6.00

Implement a Java class Circle with a private field radius (double). Include methods to calculate the area and circle.

```
public class Circle {
  private double radius;

public Circle(double radius) {
    if (radius < 0) {
        throw new IllegalArgumentException("Radius must be positive");
    }
    this.radius = radius;
}

//IF NEEDED - GETERS & SETTERS GO HERE

public double calculateArea() {
    return Math.PI * radius * radius;</pre>
```

### Question **8**

Correct

Mark 2.00 out of 2.00

#### What is the output of the following code?

System.out.println(10 + 20 + "Java" + 30 + 40);

- a. 30Java3040
- ob. 30Java70
- oc. 30Java30 40
- od. 1020Java3040

Your answer is correct.

The correct answer is:

30Java3040

# Question **9**Complete Marked out of 6.00

Create a Java program that reads a text file named input.txt, counts the number of words in the file, and print
String filePath = "input.txt";

BufferedReader br = new BufferedReader(new FileReader(filePath))

```
package src;
import java.io.BufferedReader;
import java.io.FileReader;
import java.io.IOException;

public class HelloWorld {
   public static void main(String[] args) {
      countWordsFile();
   }

public static void countWordsFile() {
    // MAKE SURE THE WORDS IN THE FILE ARE SEPERATED BY ONE SPACE ONLY, OTHERWISE EACH EXTRA SPA WORD TOO
    try (BufferedReader reader = new BufferedReader(new FileReader("input.txt"))) {
```

# Question 10

Correct

Mark 2.00 out of 2.00

What is the purpose of the super keyword in Java?

- o a. To create a new thread
- Ob. To finalize an object
- oc. To refer to the current object
- d. To call the superclass constructor

Your answer is correct.

The correct answer is:

To call the superclass constructor

### Question 11

Complete

Marked out of 6.00

Explain the concept of Object-Oriented Programming (OOP) in Java. How do the four main principles of OOP—e inheritance, polymorphism, and abstraction—manifest in Java?

Object-Oriented Programming is a programming paradigm based on the concept of objects, which are instan allows you to model real-world entities, so thw SW we write will behave like objects in the real world. it is base

- 1. Encapsulation restricts direct access to some of the object's components which improves security and red interference with its data.
- 2. Inheritance allows a class to inherit properties and behaviors from another class- makes the system more
- 3. Polymorphism allows one entity (method or object) to take on multiple forms, so behavior is customized p
- 4. Abstraction- a concept of hiding the complex implementation details , focusing on high-level operations, an implement some attributes.

# Question 12

Complete

Marked out of 6.00

Write a Java method reverseArray(int[] array) that takes an array of integers and returns a new array with the order.

```
package src;
public class Arr {

public static int[] revArr(int[] arr) {

  int[] rev = new int[arr.length];
  for (int i = 0; i < arr.length; i++) {
    rev[i] = arr[arr.length - 1 - i];
  }
  return rev;
}

public static void main(String[] args) {
  int[] arr = {1, 2, 3, 4};</pre>
```

uestion <b>13</b> orrect

Write a Java program that creates a thread which prints "Hello from Thread" five times, pausing for one second

```
package src;
public class Hello {

public static void main(String[] args) {
    Thread thread = new Thread(() -> {
        for (int i = 0; i < 5; i++) {
            System.out.println("Hello from Thread");
            try {
                 Thread.sleep(1000);
            } catch (InterruptedException e) {
                System.err.println("Thread Error");
            }
        }
    }
});</pre>
```

#### Question 18

Correct

Mark 2.00 out of 2.00

# What is the default value of a boolean variable in Java?

- a. 0
- b. false
- O c. true
- Od. null

Your answer is correct.

The correct answer is:

false

Question 19

Complete

Marked out of 6.00

Describe how Java handles memory management, particularly focusing on the heap and stack.

Memory management in Java is divided into heap & stack.

1. Heap: used for dynamic memory allocation, primarily storing un-primitive data like objects and arrays. When you create a new object using new, it is stored in the heap.

The heap is garbage collected, meaning the Java Garbage Collector (GC) automatically clears it if it detects referenced.

2. Stack: used for method execution and local variables.

Each time a method is called, a new stack frame is created containing the method's local variables and re Stack memory is automatically managed: it is allocated when a method is invoked and deallocated when

Question 20

Complete

Marked out of 6.00

Explain the significance of the main method in a Java application. Can a Java program run without it? Why or why

he main method serves as the entry point for the application. When a Java program is executed, the JVM look in the specified class that we are running in the command line (so there must not be 2 main signatures in a si

public static void main(String[] args):

public: It must be public so that the JVM can access it from outside the class.

static: It is static, meaning it can be called without creating an instance of the class.

void: It does not return any value.

String[] args: This allows the program to accept command-line arguments when it is run.

# Question **21**Complete Marked out of 6.00

Create a Java method isPrime(int number) that returns true if the given number is a prime number, and false

```
package src;

public class Prime {
    public static void main(String[] args) {

    int[] testArr = {5, 10, 15, 56, 17};
    for (int i = 0; i < testArr.length; i++) {
        if (isPrime(testArr[i])) {
            System.out.println(testArr[i] + " YES");
        } else {
            System.out.println(testArr[i] + " NOT PRIME");
        }
    }
}</pre>
```

#### Question 22

Correct

Mark 2.00 out of 2.00

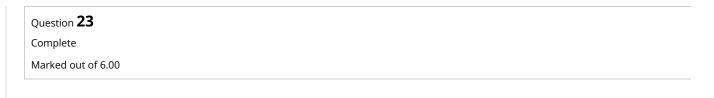

The **final** keyword in Java means that the variable or method belongs to the instance of the class.

Select one:

True

● False

The correct answer is 'False'.

Implement a Java class Car with private fields make, model, and year. Include methods to start the car, stop the c details.

```
package src;
// Implement a Java class Car with private fields make, model, and year. Include methods to start the car, stop
public class Car {
    private String make;
    private String model;
    private int year;
    public Car(String make, String model, int year) {
         this.make = make;
         this.model = model;
         this.year = year;
```

#### Question **24**

Correct

Mark 2.00 out of 2.00

# Which of the following is not a valid access modifier in Java?

 a.	pub	ш.

b. private

c. static

Od. protected

Your answer is correct.

The correct answer is:

static
